

SBTL Handicap Worksheet

The SBTL calculates a shooter's classification and handicap yardage based upon a) recent SBTL scores, b) classifications from ATA and other leagues, and c) a win or forfeit of a previous SBTL event. This worksheet replicates the logic of our shooter classification software, and will enable a shooter to calculate and verify his / her classifications.

Instructions

- 1) For each event, put your best 5 of your last 8 SBTL scores in the boxes provided.
- 2) Calculate the total of the scores.
- 3) Divide the total by 5 to determine the average.
- 4) Compare the average to the C/Y Table to determine calculated Classification or Yardage
- 5) Note your declared minimum (for handicap your ATA/PITA/NBTL yardages) in the boxes provided
- 6) Note the date of your last win in that event, what class/yardage you shot at and the next highest class or yardage
- 7) Have you shot 8 SBTL shoots since that last win/forfeit? Mark Y=yes or N=No.
- 8) If you have shot more than 8 shoots since your last win, leave the last box blank otherwise transfer the New C/Y down.
- 9) Put the Greatest of the Calc'd C/Y, Declared Mins and Win/Forfeit in the final box. This is the class or yardage where you should be shooting.
